

# Enable CDN

Enable one of our official CDN nodes, we recommend Finland/AMS from our list

Your Servers

☰

 **Plex Service is up and running**  
If you are still experiencing issues with your plex service, please contact support!

Server Controls

 Start  Restart  Shutdown  Force Shutdown

 Unclaim Plex Server  Reset Plex config  Rebuild Plex Server  Restart node

Features

 Enable CDN  What is CDN?  Install Tautulli

## Confirm the CDN is actually working, after enabling

If you have enabled one of the provided CDNs, you can easily confirm if the CDN is effective after enabling, by following these steps.

1. Verify on your appbox dashboard, that the CDN is enabled, as well as your "Server ID".

## Features

Disable CDN

CDN location currently using  
Finland-6(US)

Manage Plex Backups

## Troubleshoot

Transcoding issues

### Plex

Plex information

Plex server IP

Plex server port

Plex config IP

Server ID

21723

Shared node

2. Next, open your web browser and enter, <https://serverID.tixehosting.com> - **Remember to use your own server ID, and not the one in this image!**

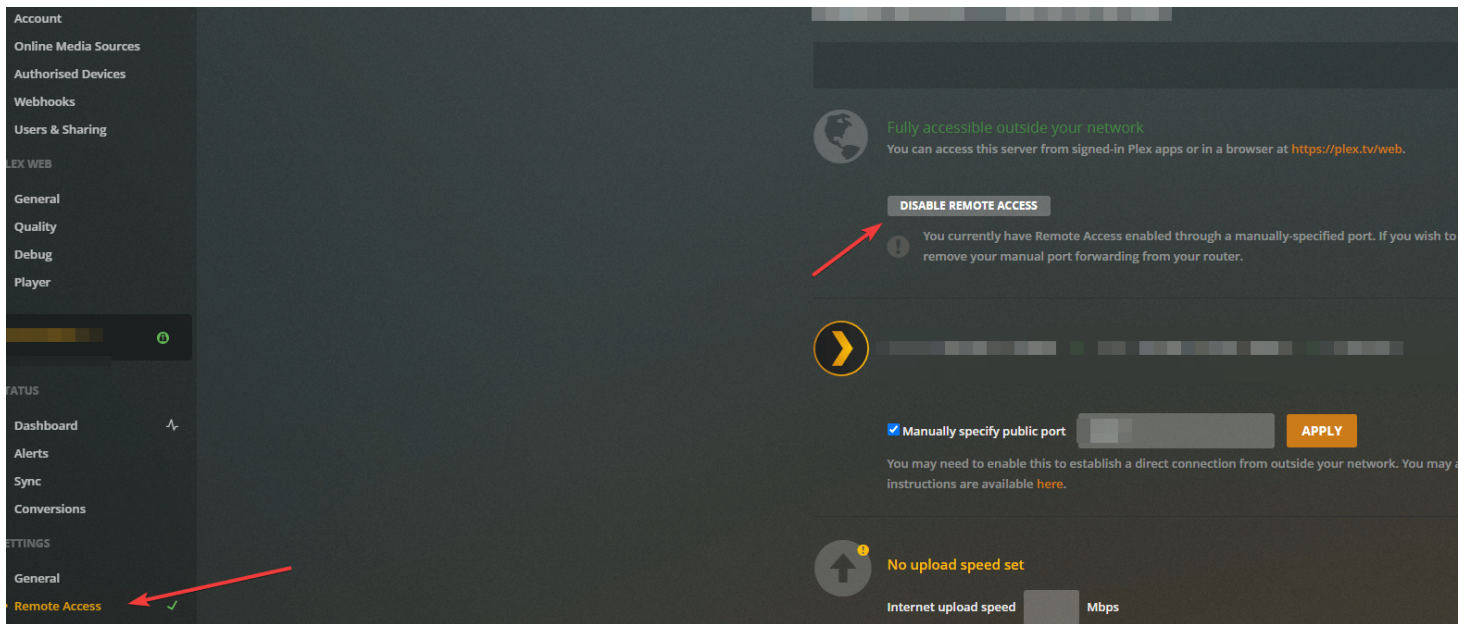

**If you see plex open when entering this in your browser, then the CDN is properly enabled. If you get an error, submit a ticket on your dashboard!**

3. Verify remote access on your appbox is disabled, to force the CDN to be used.

Login to <https://plex.tv> and click the settings icon, top left

4. Select "Remote access" and click "Disable"

CDN is now forcefully enabled
